# Economic Indicators of the Farm Sector

## Production and Efficiency Statistics, 1986

Sent

## Abstract

Farm production and input use declined moderately in 1986, while labor efficiency remained unchanged. Farm output fell 5.9 percent from 1985, while input use fell 5.4 percent, resulting in an overall agricultural productivity decline of less than 1 percent. Productivity nonetheless remained substantially above the levels achieved before 1985. The decline in output can be attributed to a 7.6-percent reduction in crop production, since livestock production remained essentially unchanged.

**Keywords:** Farm output, farm inputs, labor, productivity.

## Sales Information

The *Economic Indicators of the Farm Sector* series is available on a subscription basis. Subscription rates are \$12 domestic; \$15 foreign. Use the coupon in this issue, or send check or money order payable to "USDA/ERS" to:

USDA/ERS  
Box 1608  
Rockville, MD 20850

## Preface

This report is one of five in the *Economic Indicators of the Farm Sector* series. Other reports are *Farm Sector Review*, *Costs of Production*, *National Financial Summary*, and *State Financial Summary*.

This annual report includes major time series which reflect changes in farm production, production inputs, and production efficiency. We present national, and in most cases, regional time series data. The text highlights changes since the previous year or specified time period.

We usually revise data only for the year preceding the year in the title, but some tables reflect changes for several years. Last year, a new survey-based labor series on total hours was introduced, starting with the year 1947. As a result, all data series in this report start with 1947. The new total labor accounts and all aggregations of the input accounts, along with measures of total labor and multifactor productivity, are not comparable with similar series prior to 1947. The output accounts and some input accounts have been revised back to 1978 and 1982, respectively. Also, labor hours required for livestock and crop production, by enterprise groups, have been revised back to 1979.

This publication was prepared under the general direction of James H. Hauver. Evelyn T. Black compiled the data. Charles Cobb, formerly with the Economic Research Service, provided valuable advice in the preparation of the report.

Principal contributors and information sources are:

Farm output--James H. Hauver, Charles Cobb, Ken Krupa, and Thelma Anderson . . . . .	(202) 786-1462
Hours of farmwork--James H. Hauver . . . . .	786-1462
Labor hours required for crops and livestock-- Evelyn T. Black and James H. Hauver . . . . .	786-1462
Farm inputs--Rachel B. Evans and James H. Hauver . . . . .	786-1462
Cropland used for crops--Roger W. Hexem . . . . .	786-1419
Farm machinery--Carlos Sisco . . . . .	786-1456
Fertilizer--Harold Taylor . . . . .	786-1456
Managing editor--Jim Carlin . . . . .	786-1512
Secretarial support--Ruth F. Spivey . . . . .	786-1459

## Attention Labor Series Users

Beginning next year, the Economic Research Service will delete all labor hour requirements series from this publication and will present only survey-based labor hour indexes. If you use the labor hour requirements data and need to have it continued, please write to the following address and indicate your use of and need for the data.

# ECONOMIC INDICATORS OF THE FARM SECTOR

## Production and Efficiency Statistics, 1986

### Background

Farm production and input use declined moderately in 1986, while labor efficiency remained almost unchanged. Farm output fell about 6 percent from 1985 levels. A 7.6-percent drop in crop production caused output to fall. Livestock production remained unchanged. Farm output is the combination of total livestock and total crop production indexes after they have been adjusted to exclude goods, such as corn used for cattle feed, produced on farms and used in further agricultural production. Because of these adjustments, the farm output index may be outside the range of the index number of either of its components.

Total 1986 input use declined 5.4 percent, and production fell 5.9 percent. Consequently, overall agricultural productivity fell less than 1 percent. Productivity nonetheless remained substantially higher than levels achieved before 1985.

Quantities produced and yield per acre declined from the record highs attained in 1985 but remained high by historical standards. Production of feed grains fell 8 percent, and production of food grains declined 12 percent. Soybean output dropped 4 percent, cotton output fell 27 percent, and tobacco output declined 21 percent.

Livestock production remained stable, with moderate increases in poultry output and slight declines in the production of meat animals. Dairy products remained unchanged.

### Highlights

*Farm output* fell 5.9 percent because of a 7.6-percent decline in overall crop production from year-earlier levels. Livestock production was unchanged (table 1).

Farm output fell in nine regions, with substantial reductions in the Southeast, Appalachia, Southern Plains, and Delta States of 15, 12.7, 10.7, and 10.5 percent, respectively (see fig. 1, farm production regions). Production in the Corn Belt declined 4.8 percent, while other regions registered more modest declines. Output in the Mountain region, however, rose 5.9 percent (tables 2-11).

Although crop production declined 7.6 percent, output was still 23.9 percent above the unusually low crop production levels of 1983, a payment-in-kind (PIK) year. Production of feed grains, including corn, sorghum, oats, and barley, fell to 252 million metric tons, 8 percent below 1985's record levels. Corn production declined 7 percent to 8.25 billion bushels, but corn yield rose to a record-high 119.3 bushels per acre in 1986. Sorghum grain production in 1986 totaled 942 million bushels, a 16-percent decline. However, crop yields of sorghum rose to a record 67.7 bushels per acre. Oats production fell 26 percent to 385 million bushels, and barley output climbed 3 percent to 610 million bushels, a record high.

Production of food grains, including wheat, rye, and rice, declined 13 percent to 63.4 million metric tons. Wheat production fell 14 percent to 2.1 billion bushels, and rice production fell by less than one-half of 1 percent to 134 million hundredweight (cwt), the second smallest crop since 1980.

Production of cotton and tobacco fell 27 and 21 percent, respectively, and sugar crops increased 9.3 percent. Output of fruits and nuts declined 5.9 percent. The production of hay and forage remained unchanged.

Livestock production did not change appreciably from 1985 levels. Poultry output rose 3.9 percent, and production of meat animals registered a 2-percent fall. Dairy output was unchanged. Cattle and lamb output increased, and hog

Figure 1

## Farm Production Regions

production declined. Egg, broiler, and turkey production increased 0.2, 4.3, and 11.8 percent, respectively. Chicken production fell by less than 1 percent. Livestock production rose in the Northeast, Lake States, Appalachian, Southeast, Delta States, Southern Plains, and Pacific regions. Livestock output fell in the Corn Belt, Northern Plains, and Mountain States.

**Harvested crop acreage** dropped 5 percent to 325 million acres, a 17-million-acre decline, mainly because farmers idled 45 million acres under Federal programs, 14.3 million acres more than in 1985 (table 12). The 1986 harvested acreage was the lowest since 1973, except for 1983, when PIK and other programs idled 78 million acres. Harvested acreage peaked at 366 million acres in 1981.

Farmers planted most major crops on fewer acres. Feed grain acreage was down 9.8 million acres, food grains 4.2 million, soybeans 2.2 million, and cotton 1.7 million.

Crops exported represented an acreage equivalent of 94 million acres, up 16 percent from 1985's 81 million acres (table 12). This expansion, however, was still substantially below the high of 137 million acres in 1980. Food grains accounted for 37 percent of the export acreage equivalent, while oil crops accounted for 28 percent, feed grains 19 percent, cotton 6 percent, and other crops 10 percent.

**Cropland used for crops** totaled 357 million acres, down 4 percent (table 13). Cropland harvested reached 316 million acres, while crop failure affected about 9 million acres. Summer fallow accounted for 32 million acres.

Acreages were lower in all regions except the Mountain region where growers planted 300,000 more acres than the year before (tables 14-23). The largest acreage declines occurred in the Corn Belt (4 million), the Lake States (2.2 million), the Southern Plains (2 million), the Southeast (1.7 million), and the Delta States (1.6 million). Indexes of cropland used for crops decreased in all regions during 1985-86 except in the Mountain region (table 24). The U.S. index dropped from 98 to 94 (1977=100).

**Crop production per acre** is the index of crop production expressed as a percentage of the index of cropland used for crops and indicates relative annual yields of all crops combined (table 25). These yields per acre fell 3.3 percent in 1986. The index of crop production per acre declined in six regions (Northeast, Appalachia, Southeast, Delta States, Southern Plains, and Pacific), rose in two (Northern Plains and Mountain), and remained unchanged in two (Lake States and Corn Belt). Yields of corn, sorghum, and rice rose 1.1, 1.3, and 4.3 percent, respectively, and yields of oats, barley, and wheat fell 12.1, 0.4, and 8.3 percent. Growers managed record yields per acre for corn (119.3 bushels), sorghum

(67.7 bushels), and rice (5,648 pounds), but the yields of other crops declined, including oats (56 bushels), barley (50.8 bushels), and wheat (34.4 bushels). Wheat fell to its lowest yield per acre since 1980. Production and yields of cotton and tobacco also fell.

*Animals units of breeding livestock* declined 1.1 percent in 1986 (table 26). The number of breeding milk cows on farms was up 3.4 percent. Inventories of beef cows and breeding sows declined 4.9 and 2.2 percent, and breeding ewes fell 5.8 percent. The number of breeding hens and pullets declined 2.1 percent. Inventories of goats clipped increased 12.7 percent. Inventories of breeding turkey hens, no longer reported, are estimated to have increased moderately, based on recent trends.

Livestock production per breeding unit reached a record high, 0.8 percent above 1985's level. Milk production per cow increased 2.3 percent to 13,293 pounds.

*Fertilizer use* decreased 9 percent to 19.7 million tons (table 27). Of the primary nutrients, nitrogen and potash use decreased 9 percent each to 10.4 and 5.1 million tons (tables 28-30). Phosphate use, at 4.2 million tons, slipped 10 percent. The decline in fertilizer use was a result of fewer acres in production and lower use per acre.

Total fertilizer applications declined in all regions. Declines were the greatest in the Corn Belt, Lake States, and Southern Plains for all nutrients combined and for nitrogen. Declines in nitrogen use ranged from 5 to 13 percent, except in the Delta States, where use rose 2 percent. Phosphate use declined in all regions with the Southern Plains, Lake States, Northeast, Pacific, and Southeast regions showing the greatest declines. Drops in phosphate use ranged from 4 to 18 percent. The largest declines in potash use were in the Lake States, Southern Plains, Pacific, and Southeast regions. Declines in potash use, by region, ranged from 4 to 17 percent.

Nitrogen application rates of 132 pounds per acre on corn represented a decline of 6 percent, while phosphate application rates of 61 pounds per acre remained about the same. Potash application rates fell 5 percent to 80 pounds per acre on corn. Fertilizer application rates on cotton, wheat, and soybeans varied by crop. Application rates for soybeans of 15 pounds per acre for nitrogen, 43 pounds for phosphate, and 71 pounds for potash were about the same for each nutrient as the previous year. Wheat application rates of 60 pounds per acre for nitrogen and 36 pounds for phosphate remained the same, and potash application rates of 44 pounds per acre showed an increase of 22 percent. Application rates for cotton, at 77 pounds per acre for nitrogen, 44 pounds for phosphate, and 50 pounds for potash, were each 4 percent lower.

*Farm machinery purchases* fell to a 13-year low in 1986. U.S. farmers purchased \$4.7 billion of new and used farm machinery in 1986, down 16 percent from the year before and off sharply from the record-high \$11.75 billion in 1979. Farmers bought an estimated \$4.1-4.7 billion of new and used machinery in 1987 as the farm economy began to stabilize.

Since 1980, farm machinery repairs as a share of total farm machinery purchases have risen, reaching 44 cents for each dollar spent on purchases in 1986. During the 1970's, farmers annually spent 23-33 cents on repairs for each dollar spent on purchases.

Inventory estimates will not be revised or updated for years after 1986, pending completion of the next Agricultural Census. Table 31, which carries estimated inventory data for 1986, repeats the previous issue's information. The total on-farm inventory for January 1, 1986, fell by less than 1 percent as tractor and selected harvesting and haying equipment declined from year-earlier levels. Motor truck inventory remained unchanged from 1985. The average per unit size of the tractor inventory held constant at roughly 67 horsepower.

*Total hours of labor used for farmwork* in 1986 were 5.5 billion, down 6 percent from 1985's 5.9 billion hours (tables 32 and 33). The largest percentage decline by sales class occurred on farms with sales of \$250,000 to \$499,000, \$100,000 to \$249,999, and \$40,000 to \$99,999, with reductions in labor use of 36.4, 7.7, and 6.2 percent, respectively. These three classes made up about 50 percent of total labor use in 1986. However, only the decline of labor use by farms with sales of \$250,000 to \$499,999 was statistically significant. Statistically insignificant increases in farm labor occurred among the smallest farm sizes (from less than \$10,000 to \$39,999).

Statistically significant declines in farm labor occurred on cash crop farms (14 percent) and cotton and tobacco farms (20.6 percent). Five other farm types reported reductions in labor use, but not at statistically significant levels for all farms: greenhouse/nursery (31.7 percent), beef/hog/sheep (3.9 percent), dairy (1.9 percent), poultry (9.6 percent), and other livestock (23.2 percent). Cash grain, beef/hog/sheep, and dairy farms combined accounted for 69.7 percent of total labor use in 1986. Two farm types (nearly 16 percent of all labor use) reported increased labor, but at statistically insignificant levels: vegetable/fruit/nut (29.5 percent) and other crop (5.7 percent).

Labor on the farm declined in 7 of the 10 agricultural regions. Statistically significant drops occurred in the Lake States (13.1 percent), Southern Plains (16.2 percent), and Mountain States (18 percent). Statistically insignificant declines occurred in the Northeast (6.9 percent), Northern

Plains (4.4 percent), Appalachia (12.9 percent), and the Delta States (11.4 percent). Statistically insignificant increases in farm labor were reported in the Corn Belt (5.8 percent), the Southeast (4.2 percent), and Pacific region (6.3 percent). We recorded the following labor statistics:

Change in labor hours, by sales class, farm type, and region			
Farm characteristics	1985	1986	T-Statistic
-----Million labor hours-----			
Sales class:			
\$500,000 and over	866	845	-0.19
\$250,000-\$499,999	728	463	-4.55
\$100,000-\$249,999	1,319	1,217	-1.81
\$40,000-\$99,999	1,136	1,066	-1.26
\$20,000-\$39,999	523	537	.39
\$10,000-\$19,999	384	417	1.02
Less than \$10,000	915	976	1.06
Farm type:			
Cash grain	1,285	1,105	-3.74
Cotton/tobacco	344	273	-2.31
Vegetable/fruit/nut	464	601	1.40
Greenhouse/nursery	309	211	-1.49
Other crop	263	278	.37
Beef/hog/sheep	1,639	1,575	-1.01

Poultry	136	123	-.53
Other livestock	241	185	-1.52
Region:			
Northeast	636	592	-.60
Lake States	876	761	-2.26
Corn Belt	1,007	1,065	1.14
Northern Plains	562	537	-.80
Appalachia	597	520	-1.75
Southeast	335	349	.18
Delta States	263	233	-1.19
Southern Plains	555	465	-2.15
Mountain	433	355	-2.43
Pacific	607	645	.52

**Total farm labor productivity** remained unchanged from 1985, but substantial variation existed across regions (table 34). Production per hour rose in six regions, declined in three, and did not change in one. Labor productivity increased in the Lake States (11.5 percent) and Mountain region (28.4 percent). Four other regions reported slight increases in labor productivity: the Northeast (1.1 percent), Delta States (1.1 percent), Northern Plains (3.8 percent), and Southern Plains (6.3 percent). Labor productivity fell substantially in the Corn Belt (10.2 percent), Southeast (19.3 percent), and Pacific region (10.3 percent). The Appalachian region showed no change in labor productivity.

**Labor hours on farms required** for all crops and livestock declined 6 and 5 percent, respectively (tables 35 and 36). All crop groups, except sugar crops (up 5 percent), ex-

perienced declines. For the second straight year, tobacco declined 15 percent and cotton dipped 13 percent. Feed grains fell 9 percent, fruits and nuts declined 8 percent, food grains fell 7 percent, and oil crops and vegetables each fell 4 percent. The smallest drop, 3 percent, occurred in hay and forage.

Labor hours required for milk production declined 7 percent, meat animals dropped 6 percent, and poultry was down 2 percent.

All regions registered declines in hours required for the production of all crops and livestock (tables 37-47). The Southern Plains had the largest decline, 10 percent, followed by the Appalachian region, down 8 percent. The Mountain and Pacific regions were each down 6 percent and the Northeast, Lake States, Corn Belt, and Delta States each showed a 5-percent reduction. The Northern Plains and Southeast each measured a 3-percent decline.

**Production per hour required** for all livestock increased 5 percent. Dairy farm productivity increased 9 percent, poultry rose 5 percent, and meat animals gained 2 percent. Labor productivity for all crops rose 1 percent. Increases occurred in sugar crops and hay and forage, each up 4 percent. Fruits and nuts gained 2 percent, and feed grains were up 1 percent. All other crop groups experienced declines, with cotton decreasing the most, by 17 percent. Other declines were in tobacco (8 percent), food grains (5 percent), and oil crops (2 percent). No change occurred in the vegetable group (table 48).

Nine of the 10 regions showed increases in production per hour required for all livestock (tables 49-58). The Southern Plains region had the largest increase, amounting to 15 percent. The Southeast region gained 7 percent, while Appalachia and the Delta States each increased 6 percent. The Corn Belt and Pacific regions were up 5 percent, the Northern Plains and the Mountain regions each gained 4 percent, and the Northeast increased 2 percent. The Lake States showed no change.

Production per hour required for all crops declined in most regions. The Southeast was down the most, at 20 percent. Other regional drops were the Delta States (12 percent), Appalachia (8 percent), Southern Plains (8 percent), Northeast (4 percent), and Corn Belt (2 percent). Increases in farm production per required hour for all crops hit 18 percent in the Mountain region. The Lake States gained nearly 3 percent, and the Northern Plains and Pacific region each increased 1 percent.

**One U.S. farmworker produced farm products** for 93 persons in 1986, compared with 87.4 persons in 1985, a 6.4-percent increase (table 59). One farmworker produced enough for 58 persons in 1975 and 37 in 1965. However, to

suggest that the labor of one farmworker (farmworkers include farm operators, hired workers, and unpaid family workers) produced the food, fiber, and tobacco consumed by 93 people would be deceptive. Farmers and farmworkers have become more specialized over the years. Many jobs and functions have moved from farm to nonfarm activities. For instance, feed preparation and custom services have been transferred to nonfarm enterprises. Because of these changes, many nonfarmworkers perform functions formerly done by farmworkers. This series does not quantify off-farm contributions. Onsite employment in farm production has declined. For every worker on farms, five to six non-farmworkers provide resources and services in producing, processing, transporting, wholesaling, and retailing farm products.

The recent availability of more complete farm labor data has produced a substantial revision of estimated persons supplied for 1982-85. Upward revisions of these estimates resulted from reduced estimates of total farm employment during the period.

**Total quantity of farm inputs** used in 1986 declined 5.4 percent (table 60). The use of farm labor was off 5.9 percent. Farm real estate and mechanical power/machinery declined 2.1 and 6.2 percent. These three input groups constituted 70 percent of total inputs used in agriculture in 1986. Agricultural chemicals; feed, seed, and livestock purchases; and the miscellaneous input groups declined 9.9, 2.9, and 6 percent, respectively. Taxes and interest went unchanged. These

four input groups accounted for the remainder of all inputs used in farm production.

Purchased inputs fell 7.1 percent. Farmers used less hired labor, fuel and oil, electricity, machinery repairs and parts, and telephone and veterinary services. Purchased inputs made up 51 percent of all inputs in 1986. Nonpurchased inputs, 49 percent of the total in 1986, fell 3.5 percent when operator labor and capital consumption declined.

Total farm inputs used fell in all regions (tables 61-70): Lake States (7.5 percent), Mountain States (7.4 percent), Delta States (7 percent), Appalachia (6.8 percent), Southern Plains (6.6 percent), Northeast (4.8 percent), Northern Plains (4.4 percent), Southeast (2.7 percent), Corn Belt (2.2 percent), and the Pacific region (2.2 percent).

**Farm output per unit of input** declined by less than 1 percent from the record-high level achieved in 1985 but remained 7.6 percent above 1984's level (tables 71 and 72). Productivity of farm inputs rose in three regions and fell in seven. Multifactor productivity climbed to record levels in the Lake States, Northern Plains, and Mountain States, 3.7, 2.8, and 14 percent, respectively, above 1985's level. The Southeast registered a substantial decline of productivity, at 11.7 percent. Other regions posted smaller declines, including the Northeast (0.9 percent), Corn Belt (2.9 percent), Appalachian (6.2 percent), Delta States (3.2 percent), Southern Plains (3.8 percent), and Pacific regions (2.2 percent).

1/ The index number of farm output in some instances may be outside the range of the index number of all crops and the index number of all livestock production. 2/ Horses and mules excluded. 3/ Includes clipped wool, mohair, and for 1950 to date, honey and beeswax. These items are not included in the separate groups of livestock and products shown. 4/ Cattle and calves, sheep and lambs, and hogs. 5/ Butter, butterfat, wholesale milk, retail milk, and milk consumed on farms. 6/ Chickens and eggs, commercial broilers and turkeys. 7/ Includes hayseeds, pasture seeds, and cover-crop seeds, and some miscellaneous crop production not included in separate groups of crops shown. Farm gardens were excluded after 1964. 8/ Corn for grain, oats, barley, and sorghum grain. 9/ All hay, sorghum forage, corn silage, and for 1950 to date, sorghum silage. 10/ All wheat, rye, and rice. Buckwheat was excluded after 1964. 11/ Potatoes, sweetpotatoes, dry edible beans, dry field peas, truck crops for processing, and truck crops for fresh market. 12/ Fruits, berries, and tree nuts. Citrus production is on year of harvest, 1960 to date. Earlier years on year of bloom. 13/ Sugar beets, sugarcane for sugar and seed, sugarcane syrup, and maple syrup. 14/ Soybeans, peanuts for nuts, cottonseed, flaxseed, and for 1950 to 1964, tungnuts and peanuts hogged. 15/ Preliminary.

1/ Horses and mules excluded. 2/ Includes clipped wool, mohair, honey, and beeswax. These items are not included in the separate groups of livestock and livestock products shown. 3/ Cattle and calves, sheep and lambs, and hogs. 4/ Butter, butterfat, wholesale milk, retail milk, and milk consumed on farms. 5/ Chicken eggs, commercial broilers, chickens, and turkeys. 6/ Includes hayseeds, pasture seeds, and cover-crop seeds, and some miscellaneous crop production not included in separate groups of crops shown. Farm gardens excluded after 1964. 7/ Corn for grain, oats, barley, and sorghum grain. 8/ All hay, sorghum forage, sorghum silage, and corn silage. 9/ All wheat, rye, and rice. Buckwheat was excluded after 1964. 10/ Potatoes, sweetpotatoes, truck crops for processing, and truck crops for fresh market. 11/ Fruits, berries, and tree nuts. 12/ Sugar beets, sorghum syrup, and maple syrup. 13/ Because of the small quantity of cotton produced, the index is not shown separately but is included in total crop production. 14/ Soybeans, flaxseed, and cottonseed. 15/ Preliminary.

1/ Horses and mules excluded. 2/ Includes clipped wool, honey, and beeswax. These items are not included in the separate groups of livestock and livestock products shown. 3/ Cattle and calves, sheep and lambs, and hogs. 4/ Butter, butterfat, wholesale milk, retail milk, and milk consumed on farms. 5/ Chicken eggs, commercial broilers, chickens, and turkeys. 6/ Includes hayseeds, pasture seeds, and cover-crop seeds, and some miscellaneous crop production not included in separate groups of crops shown. Farm gardens excluded after 1964. 7/ Corn for grain, oats, barley, and sorghum grain. 8/ All hay, sorghum forage, sorghum silage, and corn silage. 9/ All wheat and rye. Buckwheat excluded after 1964. 10/ Potatoes, sweet-potatoes, truck crops for processing, and truck crops for fresh market. 11/ Fruits, berries, and tree nuts. 12/ Sorghum syrup not reported after 1959. 13/ Soybeans, peanuts for nuts, and cottonseed. Peanuts hogged were excluded after 1964. 14/ Preliminary.

These items are not included in the separate groups of livestock and livestock products shown. 3/ Cattle and calves, sheep and lambs, and hogs. 4/ Butter, butterfat, wholesale milk, retail milk, and milk consumed on farms. 5/ Chicken eggs, commercial broilers, chickens, and turkeys. 6/ Includes hayseeds, pasture seeds, and cover-crop seeds, and some miscellaneous crop production not included in separate groups of crops shown. Farm gardens excluded after 1964. 7/ Corn for grain, oats, barley, and sorghum grain. 8/ All hay, sorghum forage, sorghum silage, and corn silage. 9/ All wheat and rice. 10/ Potatoes, sweetpotatoes, truck crops for processing, and truck crops for fresh market. 11/ Fruits, berries, and tree nuts. Citrus production is on year of harvest 1960 to date. Earlier years on year of bloom. 12/ Sugarcane for sugar and seed, sugarcane syrup, and sorghum syrup. 13/ Because of the small quantity of tobacco produced, the index is not shown separately but is included in total crop production. 14/ Soybeans, peanuts for nuts, and cottonseed. Tungnuts and peanuts hogged were excluded after 1964. 15/ Preliminary.

N/A=not available.

1/ Calendar year for 1947-49. Fertilizer year ending June 30 for 1950-86. 2/ Includes 50 States and Puerto Rico.  
 3/ Includes 48 States only. 4/ To convert P<sub>2</sub>O<sub>5</sub> to P multiply P<sub>2</sub>O<sub>5</sub> by 0.43642. 5/ To convert K<sub>2</sub>O to K multiply K<sub>2</sub>O by 0.83016. 6/ Includes material for nonfarm use. 7/ Preliminary.

Sources: Primary plant nutrients: Agricultural Research Service, 1947-49; National Agricultural Statistics Service and its predecessor agencies, 1950-86. Liming materials: National Stone Association.

1/ Data as of January 1. Base data are derived primarily from Agricultural Census reports. For years not covered and items not reported in the Agricultural Census, the following information sources were used to derive estimates: Current Industrial Reports of the Census Bureau (formerly Facts for Industry), annual registrations of motor vehicles, results of surveys, changes in farm income, and estimated discard rates. 2/ Includes wheel and crawler type tractors. 3/ Data for 1975 and after are for self-propelled combines only. 4/ Includes corn pickers and picker shellers. 5/ Does not include balers, producing bales weighing more than 200 pounds. 6/ Data for 1976 and after do not include flail-type forage harvesters. 7/ Census of Agriculture year. 8/ U.S. totals for 1978 are not directly comparable with totals for 1974 or earlier census years, because they include State-level data from farm operators represented on the Census mailing list, plus estimates from the direct enumeration sample for farms not represented on the mailing list. As a result, figures for nearly all categories are somewhat higher than they would be using the earlier base. The 1974 U.S. data include only operations represented on the mailing list. Estimates are pegged to census year data for all noncensus years before 1978. 9/ Preliminary.

--- = Farmers plant a statistically insignificant amount of this crop in the region

1/ Does not include overhead labor hours. Hours for horses and mules and farm gardens were excluded after 1964.

2/ Includes horses and mules prior to 1950; includes wool and minor livestock which are excluded from separate enterprises shown.

3/ Cattle and calves, sheep and lambs, and hogs. 4/ Chickens, broilers, and turkeys 5/ Includes cotton, hayseed pasture seeds, and cover-crop seeds, and minor crops which are excluded from separate crops shown. Farm gardens excluded after 1964.

6/ Corn for grain, oats, barley, and sorghum grain. 7/ All hay, corn silage, and sorghum forage and silage.

8/ All wheat, rye, and rice. Buckwheat excluded after 1964. 9/ Potatoes, sweetpotatoes, and truck crops 10/ Fruits, berries, and tree nuts. 11/ Sugar beets, sorghum syrup, and maple products. 12/ Soybeans and flaxseed 13/ Preliminary.

1/ Does not include overhead labor hours. Hours for horses and mules and farm gardens were excluded after 1964.

2/ Includes horses and mules prior to 1950; includes wool and minor livestock which are excluded from separate enterprises shown. 3/ Cattle and calves, sheep and lambs, and hogs. 4/ Chickens, broilers, and turkeys.

5/ Includes hayseeds, pasture seeds and cover-crop seeds, and minor crops which are excluded from separate crops shown. Farm gardens excluded after 1964. 6/ Corn for grain, oats, barley, and sorghum grain 7/ All hay, corn silage, and sorghum forage and silage 8/ All wheat and rye 9/ Potatoes, sweetpotatoes, and truck crops.

10/ Fruits, berries, and tree nuts 11/ Sugarcane for sugar and seed, sugarcane syrup, and sorghum syrup.

12/ Soybeans and peanuts. 13/ Preliminary.

-- = Farmers plant a statistically insignificant amount of this crop in the region.

1/ Does not include overhead labor hours. Hours for horses and mules and farm gardens were excluded after 1964.

2/ Includes horses and mules prior to 1950; includes wool and minor livestock which are excluded from separate enterprises shown.

3/ Cattle and calves, sheep and lambs, and hogs 4/ Chickens, broilers, and turkeys

5/ Includes flaxseed, hayseeds, pasture seeds, and cover-crop seeds, and minor crops which are excluded from separate crops shown.

Farm gardens excluded after 1964 6/ Corn for grain, oats, barley, and sorghum grain 7/ All hay, corn silage, and sorghum forage and silage 8/ All wheat, rye, and rice 9/ Potatoes, sweetpotatoes, dry edible beans, dry field peas, and truck crops 10/ Fruits, berries, and tree nuts 11/ Sugar beets; and from 1975 to date includes sugarcane in Hawaii 12/ Preliminary.
